

MOLD AIR QUALITY TESTING

This is an Indoor/Outdoor air quality test for mold.

Takes 1-2 business days for our office to receive the results from the lab.

Protocols:

- We need all windows and doors shut except for normal exit or entry.
 - The A/C set on a normal setting (between 74-78 degrees) 12 hours prior to us coming out to the property.
-
- No vacuuming the day of testing.

**** Mold Note:**

There needs to be no rain present for at least 1 hour prior to testing. If it is raining during the inspection period we may need to reschedule the test.
